Show it. Control it.

WE ARE PROUD TO PRESENT THE BEST TOUCHPANEL OF THE YEAR

DIVUS TOUCHZONE

The synergy touch

Display 7" - 10" - 15" - 19"

DIVUS TOUCHZONE is a ...

- glass multi-Touchpanel for an intuitive handling in residential and commercial buildings
- dedicated screen for controlling temperature, lighting, shading and more
- home audio control panel
- an elegant interior intercom station
- control panel for energy and security management of the building
- artwork for the wall - Made in Italy
- call system for office, surgery, conference room

DIVUS TOUCHZONE combines the functions of a smartphone with building security functions. It is the product innovation for more comfort and security in every smart building!

DIVUS TOUCHZONE can be designed individually, where all your ideas and visions can be implemented with Android.

The extremely flat building-touch panel (available in the colors black and white) offers plenty of space for scaling of controls and information. The projective-capacitive full glass multi-touch display allows gesture operation, zooming and simultaneous control of different functions.

DIVUS TOUCHZONE REVIVES THE COMBINATION

DIVUS TOUCHZONE is equipped with the Android operating system. Also, DIVUS provides interesting and reliable apps that are already integrated in DIVUS TOUCHZONE.

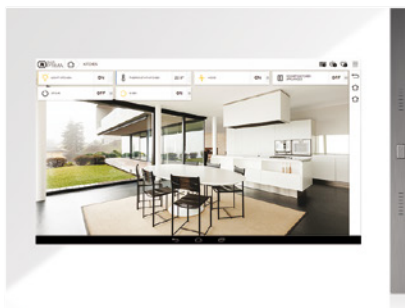

In addition to building automation DIVUS TOUCHZONE can be provided with a variety of useful and interesting apps, which multiplies the possibilities of the panel - for example the control of a stereo system or distribution of music in different rooms (multi-room system). Hence multiroom system controls can be combined with the general building control system.

Display 7"

Display 10"

Display 15"

Display 19"

The building touch panel for the wall: diverse, customizable, safe, sustainable, flexible. **It's simple: The Synergy Touch**

The driving force is the demand to make the operation available on mobile devices. DIVUS TOUCHZONE combines features of a smartphone with security-related demands for a building visualisation.

The management and control of a house must be always secure. Protected functions should be controlled not only from a mobile device; it could get into the wrong hands. But the multifunctional advantage must not suffer.

WELCOME! DOOR COMMUNICATION WITH STYLE

Another interesting field of application is the door communication. The DIVUS OPENDOOR/DIVUS TOUCHZONE is an elegantly designed bundle that promotes total comfort and optimized security in your home. And as an all in one system, it is also a groundbreaking solution.

HARD FACTS FOR TECHNICIANS

A room control device needs to allow for simple and trouble-free installation and operation. DIVUS TOUCHZONE is powered by the building network via PoE (power over ethernet), or via a 12 to 32 volt DC power supply, which is also compatible with the electrical systems in event trucks, mobile homes, ships and yachts. Communication with the KNX bus is enabled via network and a KNX gateway. The LAN interface serves as the data interface for multiroom, internet and other control systems. Two USB ports and four digital input and output ports are available on the rear of the device for specific data and signal communication.

Behind the decorative covering on the front of the device there is an additional USB port for data communication (in accordance with USB OTG specifications), as well as a microphone and speaker with echo cancelling for intercom. The system memory can be enlarged via a micro SD card.

Display brightness is controlled by an intelligent regulation, such that the display remains readable at all times and shuts off when not in use.

CONCLUSION

DIVUS TOUCHZONE can be used as a all-in-one solution for building visualisation, but it offers also absolute liberty to design your own applications. The elegant touchpanel DIVUS TOUCHZONE merges user experience of modern building visualisation and media technology in a unique design that adapts in any interior situation.

DIVUS LAUNCHER

The DIVUS LAUNCHER is the primary app DIVUS TOUCHZONE. It represents a simple 6-grid, on which a shortcut can be done in the most important functions.

Of course multiple launcher pages can be defined and you can switch between them by a simple swipe gesture.

The launcher pages can be filled with a variety of Android apps. You can download apps such as apps for building control, door communication, calendar, email, weather, games, music, energy management, finance charge, etc. on the device and have the apps always available.

DIVUS TOUCHZONE is the BEST TOUCHPANEL of the year 2015/2016! It was awarded as «Best product of the year» with the Plus X Award. DIVUS TOUCHZONE was honoured with the internationally renowned Plus X Award in the four categories «High Quality», «Design», «Ease of use» and «Functionality»!
