## Updateability – ISO 15118

This confirms that the following charging systems have already implemented ISO 15118-2 as of the above date:

- AMTRON® Professional
- AMTRON® Professional Twincharge
- AMEDIO® Professional
- Smart T PnC

The following charging systems can be updated to ISO 15118-2 and ISO 15118-20 reg. the basic implementation and other optional functions:

- AMTRON® Professional
- AMTRON® Professional Twincharge
- AMEDIO® Professional
- Smart T PnC
- AMTRON® 4You / 4Business

The updates will be planned and implemented as part of the release and roadmap planning of MENNEKES taking into account the legal and regulatory deadlines.

*NOTE: Pure ISO 15118 compatibility is not sufficient to enable these devices for bidirectional charging. For bidirectional charging, hardware requirements must be met, which will be defined in future standards (e.g. IEC 61851-1 Ed. 4 and RfG 2.0). Country-specific third-party certifications must be proven for each system before installation – this cannot be done by updating/retrofitting and applies to all manufacturers.*
