Uitzonderlijke situaties bij professioneel LAN-netwerk

- Cloud gebruikt poorten die in een thuisnetwerk standaard open staan.
 - => In professioneel kan dit uitzonderlijk toch gesloten staan.
 - => Oplossing CloudPortTester.exe
- In professioneel netwerk: naam server (=DNS server) van provider of Google gebruiken (bv. 8.8.8.8)

Cloud e	n IP-can	nera's:
---------	----------	---------

Naar de IP camera toe:

- Apart poortnr. Nodig per IP-camera
- In te stellen in settings IP-camera
- Naar **router** toe :
 - Apart poortnummer IP-camera forwarden in router naar IP-adres van IP-camera
- Naar **Cloud** toe (= het enige wat wijzigt):
 - Enkel een URL naar het lokale IP-adres nodig
 - Poortnummer opgeven die werd geforward in router
